EDUCATION

University of Maryland, College Park, MD, USA

- M.S. in Computer Science · Aug 2016 – May 2018
  - Cumulative GPA: 3.837 / 4.000
  - Relevant Courses: Optimization, Machine Learning, Liner Algebra, Probability and Statistics.

Delhi Technological University, New Delhi, India

- B.Tech. in ECE · Aug 2012 – May 2016
  - Last 2 years GPA: 80.00 / 100.00

RESEARCH EXPERIENCE

University of Maryland, College Park, MD, USA

- Graduate Research Assistant, Computer Science Dept · Apr 2017 – Present
  - **Developed Phasepack:** Phase Retrieval is an example of a non-convex quadratic program with quadratic constraints. In the real-valued case, it is a combinatorial problem which is known to be NP-hard. Despite this observation, recent years have seen the development of new algorithms that solve phase retrieval problems ef- fectively. Unfortunately, because of the lack of publicly available real-world data, the lack of a common software interface for different algorithms, and a knowledge gap between practitioners and theoreticians, only little work has been devoted to compare and evaluate newer phase retrieval methods. So we created Phasepack, comprehensive library that compiles all the algorithms within a uniform interface.
  - **Low Rank Matrix Recovery:** Another example of intractability associated with non-convexity is low rank matrix recovery with quadratic measurement constraints where a solution is obtained by lifting the problem to a higher parameter space. To elaborate, lifting expresses a system of quadratic measurements as a system of linear equations whose solution is a matrix that obeys a rank constraint. However, working with matrices instead of vectors in higher dimensions generally means incurring large storage costs. As part of my MS thesis I am trying to solve the problem of low rank matrix recovery from quadratic measurement constraints without lifting i.e. in the natural parameter space. We observed that that Phasemax (Goldstein and Studor, 2016) solves phase retrieval by recovering solutions in the same space as the input without lifting to higher dimensions. Consequently it is a better alternative to current lifting solutions for solving SDP's. Initial sketches of my proof look promising and I am currently in the process of formalizing this.

WORK EXPERIENCE

IIIT Delhi, New Delhi, India

- Intern, Swarath - The Driverless Car Project · Jan 2016 – Jun 2016
  - Helped design the lane detection module for the perception module using ROS, C++, and OpenCV.
  - Implemented the localization and navigation algorithms used in the planning module.
  - Helped design India's first joystick enabled e-Rickshaw. Won the **first prize** in IIIT Delhi's Research Showcase in March 2016

ACHIEVEMENTS & STRENGTHS

- Top Writer on Quora in mathematical optimization category
- State level chess player

- Speed math
  Published a number of techniques for speed arithmetic without paper and pencil.

PROFESSIONAL SERVICE

Dept of computer science, UMD,
College Park, MD, USA

- Application Reviewer for graduate school admissions.   2016 – Present

TECHNICAL SKILLS

LaTeX, MATLAB, Python, C++, Microsoft Office Suite

INTERESTS

Chess, Academia, Mental Math,
